

AMENDMENTS TO THE SPECIFICATION

IN THE SPECIFICATION:

*Please replace the paragraph beginning on page 6, line 8, with the following amended paragraph:*

The inventive virtual oven system may also utilize an inventive database. In particular, the preferred database used by the virtual oven system invention is the inventive ~~includes a~~ stress-test information database stored in a computer-readable medium and usable for storing information related to a stress-test of different products, comprising: a product data entity storing product-specific information for a plurality of the different products that may be subjected to the stress-test; a process data entity storing testing process information for conducting one or more stress-test processes of the stress-test; a result data entity storing stress-test result information relating to one or more results of the stress-test processes; a product-result map relating said product data entity to said result data entity; and a process-result map relating said process data entity to said result data entity.

*Please replace the paragraph beginning on page 30, line 5, with the following amended paragraph:*

The preferred implementation of the database 40 is shown as database 400 in Figures 11-15 but is also referred to herein as a "stress-test information database" since it stores information related to a stress-test of different products as further described below. The term "database 400" is a shorthand notation for the inventive stress-test information database.
